**Avocado Security Wins Double Nomination for “Hot Ticket Awards”
by NVTC for Enterprise Security + Business Intelligence Platform**

*Integrated CCTV Security + Business Intelligence (BI) Platform Enables Unprecedented Modularity,
Scalability, Speed, and Ease of Implementation*

WASHINGTON, DC (May 29, 2008), Avocado Security, the world’s pioneer On-Demand Security and BI Optimization Platform, today announced a major and double awards nomination and recognition from the largest technology council in the USA. Now in its Seventh year, the Hot Ticket Awards celebrates the efforts of entrepreneurial companies and management of the technology community who have exhibited "something special" - great vision, the ability to implement and deliver an innovative management approach or star-quality charisma.

"Accentuating the collaboration between security, IT and information management, NVTC’s Hot Ticket Awards nomination is bestowed upon a select group of organizations that leverage IT to achieve business results," said Kevin Shahbazi, CEO of Avocado Security. "Our team’s ability to look at physical security, video surveillance and Business Intelligence in creative ways and offer practical solutions paved the way to create modular and scalable enterprise security solution, with business metrics, convenient implementation and ease of use."

The Northern Virginia Technology Council (NVTC) is the largest technology council in the nation and is the membership and trade association for the technology community in Northern Virginia. NVTC has more than 1100 member companies representing about 200,000 employees. Its membership includes companies from all sectors of the technology industry.

"Double nomination by NVTC’s for Hot Ticket Awards is a great honor and we are thrilled to have been selected for both of these recognitions," said Kevin Shahbazi, CEO of Avocado Security. "We continue to invest in technology and individuals who have helped make these consistent recognitions

possible. We are very focused upon the communities we serve, and improve the quality of our lives in various markets.”

Avocado Security converts video footage into meaningful, actionable graphs and statistics for easy comparison. For example, you can look at a particular camera activity from 8 to 10 AM, and compare traffic to the previous day or week. CCTV images can be collected across your entire organization. These images can then be used to study security events and patterns of activity for one camera, one gate, campus or the entire enterprise.

Avocado Security’s platform can integrate an organization’s security platform across multiple locations, and can showcase the security details of each location by generating daily, weekly and monthly status reports, empowering security personnel with the information and knowledge that is needed to better manage all of their security needs –in multiple locations. This new technology brings about innovative security and productivity measures for clients who desire to improve their security, operation and IT infrastructure.
